

Casted and plastic blocks

Casted and plastic blocks from KERN-LIEBERS Textile for the warp knitting industry.

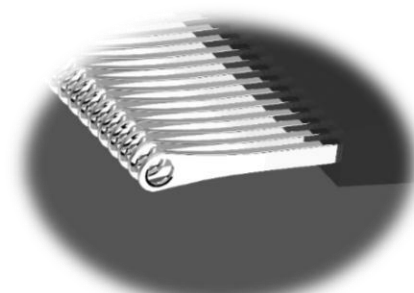

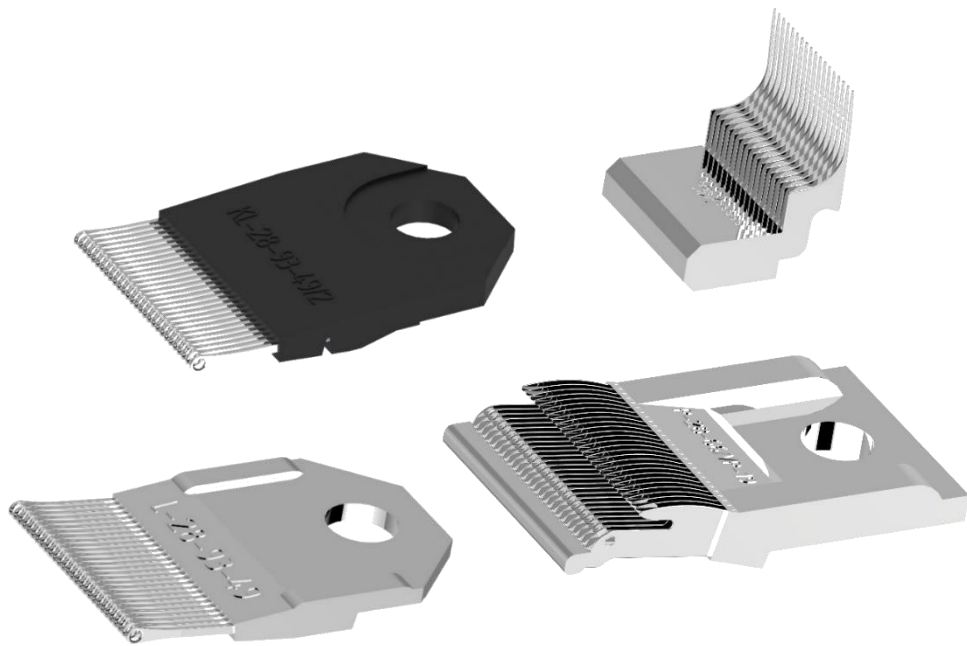

As a long-standing partner for the warp knitting industry, KERN-LIEBERS Textile is known worldwide as a reliable producer for its complete range of products.

In the production of conventional blocks in particular, but also in the production of plastic blocks, our decades of experience in highly complex production processes for the manufacture of blocks provide decisive benefits to the customer. A perfect chrome coating and the tightest tolerances in terms of the evenness of the individual parts form the basis for a high-precision manufactured block.

These uncompromising standards have been set for many decades through close cooperation with leading warp knitting machine manufacturers, and therefore also constitute the high-end solution for quality-oriented end customers worldwide.

The benefits:

- Fully compatible warp knitting elements from a single source for optimum stitching patterns and loop formations
- Minimum tolerances in terms of chrome coating thickness, evenness and parallelism of the individual elements
- OEM cooperation ensures the highest quality standards
- High productivity and maximum efficiency

Long service life due to optimum chrome coating
